PRODUCT REVIEW

Creation & Customisation

Powder Module

Roxane powder dosing machines work on a wide range of powder types. Granules, crystals, fine powder, pigment can be taken and measured with milligram to gram accuracy. Efficiency and repeatability are the key words for Roxane powder dispensers.

Qualité & précision

The powder dosing system developed and patented by Roxane allows the automation of the dosing of the most complex solid products. The control system combined with an innovative mechanical system allows for unequalled levels of dosing accuracy, and adapts the flow rate to the quantities required for the benefit of the productivity. The accuracy of the weighing and the capacity of the sampling are linked to the scale with which the module is equipped.

Configuration

Roxane powder machines can be combined with liquid dosing machines or completely independent. Fitted with a storage conveyor or supplied by a warehouse, they are fully autonomous. The Roxane powder machines are equipped with hoppers with capacities of 6, 8.5, 10 or 20 liters.
