

ROXANE

PRODUCT REVIEW

Creation & Customisation

Roxy 200

The Roxy 200 is a very compact and quiet machine that fits perfectly into laboratories. It is particularly suitable for formulation tests involving difficult, pasty, viscous, sticky raw materials or requiring special storage conditions.

Qualité & précision

Thanks to its highly sophisticated VDS-201 valve control process, each dosage is performed very accurately and repeatedly within the imposed tolerance window. The system eliminates the risk of cross-pollution between raw materials. All operations on the Roxy 200 are systematically tracked. The system adapts automatically and continuously to fluctuations in the working environment (temperature, tank filling) without any human action.

Configuration

The Roxy 200 incorporates the storage tanks for the 32 liquid or pasty raw materials which are arranged in crown around the vertical axis of the machine. The control system of the VDS-201 distribution equipment, the scale and the composition beaker are rotated around the same axis.
