

ROXANE

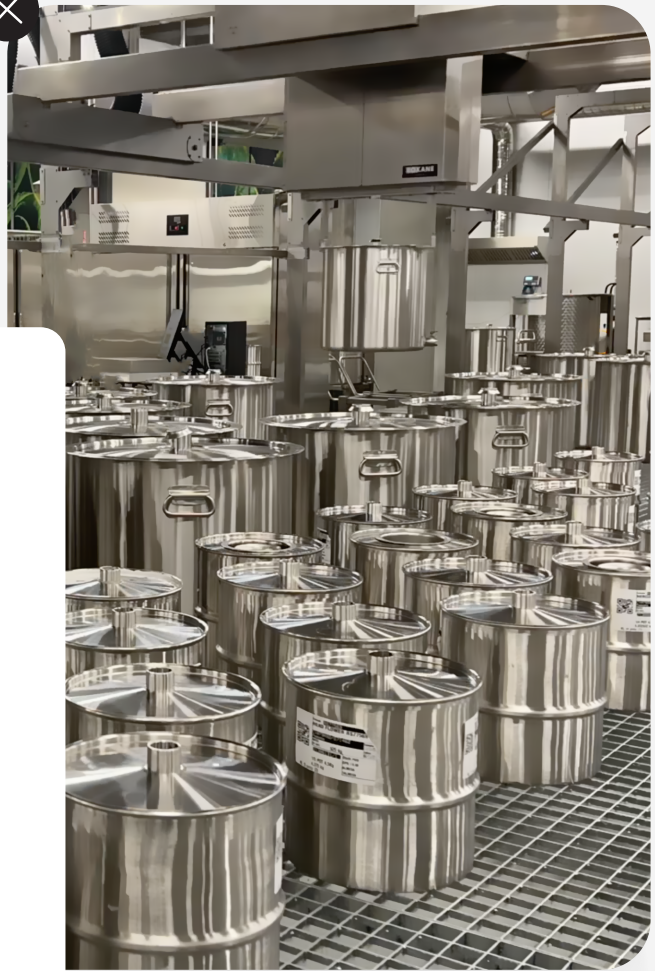

PRODUCT REVIEW

Storage

Store

The Roxane storage robots, fully automated and autonomous, are used to manage the storage of all types of containers, bins and production receivers. Storage robots can accommodate any kind of materials that need to be managed, stored and tracked electronically.

Avantages

Remote control

Customisable

Flexible use

Low maintenance

Organisation

The adaptability of these robots allows multiple formats to be managed with one single piece of equipment. The storage facilities supervision system offers multiple functions such as real-time visualisation of the storage contents, automation management of free and occupied spaces.
